

HERCULES WORKSHOP ATARI VIDEO CABLE KIT
CHROMA VIDEO + LUMA VIDEO + COMPOSITE VIDEO - Atari (8-Bit)
INSTRUCTIONS

REORDER NO. H0A5PY6

THIS IS A SPLIT AV CABLE WITH SEPARATE CHROMA, COMPOSITE AND LUMA VIDEO SIGNALS. COMES WITH REPLACEABLE / REMOVABLE COMPOSITE VIDEO PATCH CABLE. COMPATIBLE WITH 800 800XL 1200XL 65XE AND 130XE. (NTSC AND PAL).

Product Compatibility :

Atari 800/800XL/1200XL/65XE/130XE Home Computers

Usage :

This cable is used to provide separate (split) video signals from the monitor port of your vintage Atari.

Function :

Typically used to connect to video monitors such as the Commodore monitors that have separate video inputs for Chroma (C), Luma (Y) and Composite signals (AV). Can also be used for S-Video with the addition of an S-Video adapter with Chroma and Luma inputs (available separately in our store). This cable comes with a removable / replaceable composite video patch cable so it can also be used with most modern TV's.

800XL/1200XL Notes :

On most models of North American 800XL and 1200XL, Atari for reasons known only to them left the Chroma (C) video signal disconnected internally, so that signal will be unavailable unless reconnected internally. Composite video and Luma video are not affected.

Instructions :

CONNECTING TO A VIDEO MONITOR

Connect RED plug to Chroma, YELLOW plug to LUMA and WHITE plug to Audio IN.

CONNECTING TO A TV OR VCR

Connect BLACK jack (using the included BLACK patch cable) to Video IN and WHITE plug to Audio IN.
